Ford Finder

Home:

On this page I would like to make the 3 images on the front page expand

The images look strange now I am aware they will be changed to fords when working on the final project

As I am making this I realized that I don't want to add everything as in text and images it will take a lot longer than what I am making this. So in the project I put Information about the cite, this will hold like what the cite is and what is does. I

I will say this is a little confusing to use I would like to add a background to my title

Login:

After the person gets logged in it will then send them to the Ford search.

This will call from the database that the person has already stored data

Register :

After the person where to register they would get sent to the login to make sure it was done correctly

Going to this page means that the person has no info in the database and wants to add more

Ford Search:

This is where most of the magic happens

Im going to make it so the years for searching are 2000-2024 to make it a little easier on me.

For the years I would like to have it as a drop down to pick the year

For the model I want the end user to be able to type in what they want and if what they imput throw an error (please imput a correct vehicle model ex: explorer)

Ford Section

I am still a little unsure on how this page will be built because there is so many different models and years to for I don't know if I should do a list like we did in PHP number 4 with that long table OR do it like a colum where it shows the picture of the vehicle and when you click on it it shows up a dialog box on what it is.

This page will only be open when the search has been completed on ford search

Other:

I would like to make my background off all my pages this color d9d9d9 which is a lighter grey (something a little different)
